

Course overview:

Oracle 10g Designer Advanced Repository Administration

(D126eng, 2-day)

www.courseware.co.uk
sales@courseware.co.uk

Overview and objectives

The objective of this course is to consider the advanced features for managing an Oracle Designer repository. Among the specific topics covered are building and maintaining configurations as part of advanced version control, including external file references within the repository structure, using the Dependency Manager to handle application interrelationships, and using the RON utilities to perform specific administration tasks

Who should attend?

The target audience for this course is administrators of the Oracle Designer repository or database administrators who wish to understand the tasks involved in supporting the Oracle Designer environment

Prerequisites

Oracle 10g Designer Repository Administration
